

DROP PREVENTION STATIONS

Drop Prevention at the Workface

These innovative Drop Prevention Stations provide the site with a one-stop shop for tethering tools. An employee, trained in tool tethering, mans the station and tethers tools for nearby craft, eliminating costly trips to and from distant toolrooms or site storage. Simply keep the station stocked with the appropriate product and lock it up when not in use.

Turnkey Design: Ready to go when it hits the jobsite

Convenient: Keep it stocked and tether any tools on the spot

Easy-to-Use: Labels indicate appropriate attachments and tethers

Step-by-Step Instructions: Tether guides and posters included

Fully Equipped: Digital scale, tools for tethering, guides, and directions all included

Mobile: Strategically place anywhere on the site—no more walking to the tool room to tether your tools

Innovative: The future of tethering on a jobsite

Secured: Lockable and weatherproof

Each Drop Prevention Station comes stocked with tethering and attachment point guides (A), necessary tools to apply attachment points (B), a scale for weighing the product (C), and a poster guide (D) to ensure better drop prevention practices on the jobsite.
